

DATE: July 6, 1960

TO : Dr. Grobstein
Biology Department

FROM : J. Lederberg
Genetics Department

SUBJECT:

Dr. J. G. Atherton from the Department of Bacteriology, University of Queensland, Herston NS, Brisbane Qld., Australia, was visiting here a couple of weeks ago. He is the chap who has been doing the studies on the intercellular transfer of pox viruses that I think we have talked about before as an analogy to the induction phenomenon. He was sorry he didn't have a chance to see you during his visit which was a hasty one but he did ask me to transmit his request for reprints of your own work on the filter passing induction effect.
